REEFTOP

ECO-FRIENDLY BOUTIQUE HOTEL

The RE2020 building environmental regulations estimated the carbon footprint of the reinforced concrete shell of 254 kg CO₂eq / m².

By rehabilitating this 3,500 m² building, built in 1974.

The carbon savings are 88,900 kg CO₂eq. This corresponds to the CO₂ emissions produced by 15 cars in a year.

This phenomenon is all the more important in Tahiti because of its insularity and the carbon impact linked to the import of raw materials.

ECO-FRIENDLY BOUTIQUE HOTEL

Part of our decoration is made from Miconia, an invasive plant that results in a very significant reduction in the light available to plants native in French Polynesia.

The entire hotel is fitted with Stopsol glazing which reduces solar heat by 65%.

Our hygiene products are natural products purchased locally based on Monoi oil.

Hotel customers adopt an eco-responsible approach during their stay: 100% selective sorting throughout the hotel.

Most of the food products come from local producers.

We have a plastic waste reduction policy in order to preserve our environment, especially wildlife and the oceans.

The Kon Tiki Tahiti team is also aware and trained! Reduction in water and energy consumption, waste management, eco-labeled cleaning products. An approach that contributes to the preservation of the ecosystem.

All of the lighting on the Kon Tiki is LED, which is environmentally friendly lighting.
